

AMENDMENT TO THE CLAIMS

1. (CURRENTLY AMENDED) A method of filling an order using at a product moving device that engages and supports a pallet in a store, comprising:

receiving a list transmitted to a first device coupled to the pallet, including at least one item, representative of the order ~~at the product moving device~~;

transmitting the list from the first device to a second device on the product moving device;

displaying the list to an operator on a display device on the product moving device;

placing an item on the list on the ~~product moving device~~ pallet;

detecting an item placed on the ~~product moving device~~ pallet by receiving a signal from a tag on the item and identifying the item based on the received signal;

reflecting detection of the item ~~in the product moving device~~ on the list displayed on the display device; and

electronically displaying, at the product moving device, a route within the store for the operator to travel with the product moving device to obtain all remaining items on the list.

2. (CANCELED)

3. (CURRENTLY AMENDED) The method of ~~claim 2~~ claim 1 wherein receiving the signal includes:

receiving data from the tag related to the item at the ~~product moving device~~ pallet.

4. (CURRENTLY AMENDED) The method of ~~claim 2~~ claim 1 wherein receiving the signal further includes;

receiving a radio frequency (RF) signal from the tag on the item.

5. (ORIGINAL) The method of claim 1 wherein receiving the list further comprises:

receiving a number desired for each of the at least one item.

6. (ORIGINAL) The method of claim 5 wherein displaying the list further comprising:

displaying the desired number of the at least one item from the list on the display device
on the product moving device.

7. (ORIGINAL) The method of claim 6 and after detecting further comprising:

deducting the number of the item detected from the desired number of the item in the
order; and

updating the display device to reflect a new number of the item remaining to fill the
order.

8. (ORIGINAL) The method of claim 1 further comprising:

receiving an indication of a next item in the list to load on the product moving device.

9. (ORIGINAL) The method of claim 8 further comprising:

displaying on the display device the next item on the list.

10. (ORIGINAL) The method of claim 9 further comprising:

highlighting on the display device the next item to obtain on the list.

11. (ORIGINAL) The method of claim 1 further comprising:

receiving at the display device an indication of specific handling instructions for one of
the at least one item on the list.

12. (CANCELED)

13. (ORIGINAL) The method of claim 9 further comprising:

receiving an indication of a direction to a next item on the list.

14. (ORIGINAL) The method of claim 1 further comprising:

querying the operator about additional items not on the list.

15. (ORIGINAL) The method of claim 1 further comprising:

determining if the detected item is on the list; and

providing an indication to the operator if the detected item is not on the list.

16. (ORIGINAL) The method of claim 15 further comprising:

adding the detected item to the list on the display device

17. (ORIGINAL) The method of claim 16 further comprising:

displaying on the display device the detected item in a format different from the at least one item originally on the list.

18. (ORIGINAL) The method of claim 1 further comprising:

accessing additional data about one of the at least one item on the list through the display device.

19. (ORIGINAL) The method of claim 18 wherein accessing the additional data further comprising:

using a user interface component of the display device to access the additional data for the at least one item.

20. (ORIGINAL) The method of claim 1 wherein when a last item on the list is placed on the product moving device, the method further comprising:

instructing the operator of the product moving device to take the product moving device to a specific location.

21. (ORIGINAL) The method of claim 1 further comprising:

removing the item from the list in response to the detection of the item on the product moving device.

22. (CURRENTLY AMENDED) An order filling system comprising:

a first computer system;

a picklist containing a list of desired items to fill an order;

a ~~motorized~~ product moving machine having a first reader disposed thereon, connected to the first computer system;

a pallet having ~~an identification tag~~ a tag, readable by the first reader on the ~~motorized~~ product moving machine, the ~~identification tag~~ storing a pallet identification and data related to the order including the picklist in a form readable by the reader, the pallet identification being associated with the order in the first computer system and wherein the tag is configured to read data from an item tag disposed on each of the items that is placed on the pallet;

a display device connected to the ~~motorized~~ product moving machine configured to display the picklist; and

wherein the picklist is generated at the first computer system and transmitted to the first reader on the ~~motorized~~ product moving machine.

23. (CANCELED)

24.(CURRENTLY AMENDED) The order filling system of claim 22:

wherein the picklist corresponding to the pallet identification on the tag is transmitted to the display device on the ~~motorized~~ product moving machine when the ~~motorized~~ product moving machine and the pallet are operably, physically coupled to one another.

25. (CURRENTLY AMENDED) The order filling system of claim 22 wherein the ~~motorized~~

product moving machine is a forklift.

26-27. (CANCELED)

28. (CURRENTLY AMENDED) The order filling system of claim 27 wherein the reader of the ~~motorized~~ product moving machine is configured to receive information from the ~~identification~~ tag on the pallet as items are placed on the pallet.

29. (ORIGINAL) The order filling system of claim 22 wherein the display device comprises:

- an order information area;

- a location area;

- an information area; and

- a user interface area.

30. (PREVIOUSLY PRESENTED) The order filling system of claim 29 wherein the order information area comprises:

- an order number area;

- a product loading portion display area configured to display an identifier number for the pallet; and

- a picklist area configured to display data related to items on the picklist.

31. (PREVIOUSLY PRESENTED) The order filling system of claim 30 wherein the picklist area comprises:

- a description for each item on the picklist;

- a quantity of each item required;

- a number of each item present on the pallet; and

- a number of each item remaining to be picked to finish the picklist.

32. (ORIGINAL) The order filling system of claim 31 wherein the picklist area further comprises a location indicator for each item providing information as to a current location of each item on the picklist.

33. (PREVIOUSLY PRESENTED) The order filling system of claim 31 wherein in response to an item being placed on the pallet, the display device is configured to change the number of the item present and the number of the item remaining.

34. (ORIGINAL) The order filling system of claim 29 wherein the user interface area comprises a plurality of buttons on the display device.

35. (ORIGINAL) The order filling system of claim 34 wherein the user interface is configured to change the information displayed in response to a user input.

36. (CURRENTLY AMENDED) The order filling system of claim 29 wherein the display device is configured to provide an alert if an item not on the picklist is placed on the pallet ~~that is not contained in the picklist.~~

37. (CURRENTLY AMENDED) The order filling system of ~~claim 23~~claim 22 wherein the tags and readers operate using radio frequency (RF).

38. (CURRENTLY AMENDED) The order filling system of ~~claim 23~~claim 22 further comprising:

a second computer system for generating the picklist; and

a transmission link between the first computer system and the second computer system.

39. (ORIGINAL) The order filling system of claim 38 further comprising:

a portable electronic device; and

wherein the second computer system transmits the order to the portable electronic device and the portable electronic device transmits the order to the first computer system.

40. (CANCELED)
